## Wiring Diagram:

### Notes:

- Maximum length of LED Strip ---- ≤5meters.
- Maximum length of cable from Driver plus Controller(if applicable) to LED Strip ---- ≤5meters.
- Preferably use 18AWG( 0.81mm<sup>2</sup> ) 2 core cable for 5m span between Driver and LED Strip.  
In case of less than 2m span between Driver and LED Strip, please use 20AWG( 0.52mm<sup>2</sup> ) 2 core cable to minimize voltage drop. Use appropriate size cable with correct polarity between Driver and Controller (if applicable) to minimize voltage drop.  
A two way connector(installer scope) may be required to connect incoming 18AWG( 0.81mm<sup>2</sup> ) wires with 20AWG( 0.52mm<sup>2</sup> ) wires required at LED Strip end.
- Ensure firm and durable connections to respective LED Strip terminals.
- Please ensure correct polarity connections between Driver and Controller(if applicable). Also ensure correct wiring connections(per color coding) between Driver/Controller(if applicable) and LED Strip.
